TGE Stacker Beams

In standard form are equipped with a central rotating hook

Stacker Beams

made in
Germany
Stacker Beams TGE

You can also use you stacker as a crane for lifting and transporting loads.

For this, you need a BETA stacker beam. These slide onto the tines of the stacker, are secured with clamping screws and in standard form are equipped with a central rotating hook for suspending loads.

The stacker beams can also be equipped with adjustable attachment points, crane arms and custom fittings, e.g. for turning.

- Secure and effective load handling equipment for hoisting and transporting heavy loads.
- Sturdy design for maximum reliability and safety, optimum variability and easy handling.
- Numerous combinations of load carrying capacity, gripping width and suspension possible. Ask us about custom solutions and accessories!
- Robust and durable for use in industrial, craft and trade environments.
- Standards and directives: EC Machinery Directive 2006/42/EC, DIN EN 13155 (Cranes, Non-fixed load lifting attachments), DIN EN ISO 12100, DIN EN 13001, BGV D6, BGR 500.
- Range of application: Load change < 20,000 kg, Temperature -20° to 80° Celsius.
- Testing: BGR 500 and UVV before first commissioning by a competent inspector, chosen by the customer.

Our General Terms and Conditions apply. They are available on the Internet under www.beta_mb.de.
